

Forearm Support [E1230CM , E1232CM]

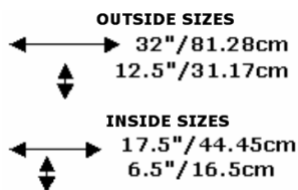

Morency™ forearm supports are based on the simple principle that the muscles in your neck, shoulders, and forearms are ill equipped to sustain static load. Providing support for these muscles reduces the static muscle demand, increases blood flow, and increases comfort. Recent research indicates that providing upper extremity support increases blood flow, reduces pain and discomfort, and the risk of developing work related musculoskeletal disorders.

CODE:
E1230CM (Shoulder width between 16" and 26")

Specifications:

- Perfect for the home or office setting.
- Reduce muscle activity in the neck and shoulders.
- Decrease static strain, fatigue, discomfort and pain.
