

Mini-keyboard

The low profile mini-keyboard is a compact 101-style keyboard that is similar in size and feeling to a laptop keyboard. Dimensions of the alphabetic keys are identical to those of standard keyboard. Only some of the bottom row and right column are slightly narrower. The keypad and function keys are embedded into the keyboard to cut down on size and key travel. The keyboard is lightweight and has folding feet which, when open, give you an elevation of about 1". Helps reduce the arm amplitude when the mouse is in use.
