

## Wireless PenMouse

The wireless "PenMouse" is a pen shaped optical wireless computer mouse that also works as a laser pointer. In the "Mouse Mode", it provides the convenience and comfort of a traditional pen with a "pen-and-paper"-like sensitivity for working over almost any non-reflective surfaces, including soft and irregular surfaces; such as a pillow or a person's lap. This unique property allows the user to change work positions at will. This minimizes fatigue and avoids potential carpal tunnel syndrome that may be linked to prolonged use of the traditional mouse. In "Presenter Mode", the wireless "PenMouse" performs like a wireless laser pointer with a 10-meter operating range. Though the wireless "PenMouse" works very well at the desktop, it also makes an excellent laptop mouse. Its size and minimal work space required, makes it perfect for portable uses.

You can use the pen mouse on almost any surface

Directly on desk

or on your lap

### CODE :

- EVM221

### FEATURES :

- 1000DPI true optical resolution.
- Patented optics also operates on soft and curved surface.
- 2.4GHz RF technology with 10 meter transmission distance.
- Built-in rechargeable Li battery.
- Non-disruptive USB based battery charging.
- Ergonomic pen style form factor.
- 2 independent mouse button
- Laser pointer.
- Page up/page down presenter function.
- Driver-free Plug-and-Play USB device.
- Weighs only 35gm/1,2oz.
- Dimensions :  $\frac{3}{4}$ "X1" (1.9x2.5cm) by 5 $\frac{1}{4}$ " (13.3cm) in length.

### COMPATIBILITY :

- Windows 98SE, 2000, Me, and XP with USB port.
- Mac OS 8.6 and later with USB port.
- Linux with USB port.
