

Trackpad Pro [ECKLB35 , ECKLB35BLK]

All the ergonomic benefits of a small form factor gel wrist pad, but with the added convenience and control of a central embedded trackball. No more extending your arm to move your mouse. When not actively typing, the gel pad will support your wrists and relieve pressure on the median nerve (the cause of pain in carpal tunnel and other RSI). The IBM compatible Trackpad Pro, nestles between the dual wrist rests. The trackball is low profile. It may be used for easy pointing, clicking, and dragging operations in all Windows-OS software environments.

Features :

- ¾"/19 mm opto-mechanical trackball.
- High reliable micro-switches.
- 3 button mouse functions attached.
- PS/2 +USB interface.
