

These LCD monitor risers allow you to choose the right height for your monitor. They will help you adjust the top of your screen to the proper eye level. With the 1" and 2" increment blocks available, you choose the number of blocks you require to attain the desired height. They simply stack on one another. The risers can also be used to elevate other office equipment, like a printer or a fax machine. You also gain storage space under your monitor, printer or fax.
